What are the Benefits of Kiosk?

Remove Technical Barriers

Kiosk removes technical barriers and allows more people to submit improvement ideas, regardless of whether or not they have access to a computer in their daily work.

It is perfect for work environments where employees don't work on a personal computer all day - they might be on the shop floor or using a shared workstation.
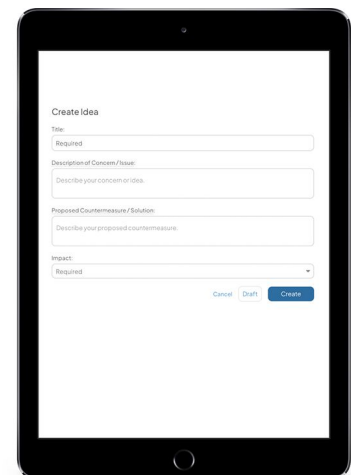

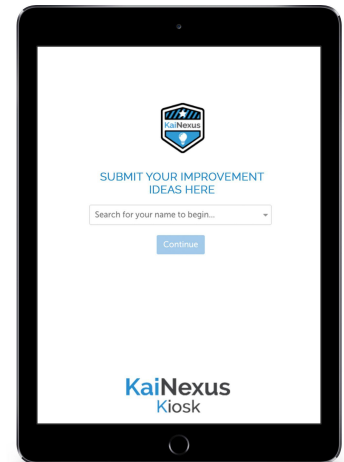

Minimal Training

Users need minimal training to use the module. There is no login information or complicated steps to remember. Users just choose their name from the dropdown menu, submit their idea, and that's it!

It can be helpful to both regular and advanced users who need to submit items on the fly and come back to them later.

Quickly Submit Ideas

Users can quickly submit items with minimal disruption to their workflow. Set up the Kiosk in a popular area where people are already doing their work, and that way, they can submit their idea without skipping a beat.

How does Kiosk work with Wallboard?

Kiosk can be synced with the Wallboard module to create a KaiNexus station:

1. Set up your Kiosk in a popular area where people are doing their work
2. Users select their name from the drop down menu
3. Users can easily submit their idea
4. Ideas are synced to a Wallboard that shows all Kiosk submissions. One way to increase interest and engagement is by displaying a Kanban board that shows Kiosk submissions in the To Do column and the progress of those ideas as they move through Doing and Done.

What are the Benefits of Wallboard?

Digital Displays

Replace your analog boards with digital ones to make sure the information is always current, on every board, in every location. Show up-to-date charts and KPIs, track improvements as they progress in real time, and dive down into the details of any initiative whenever you need to.

Rotating Wallboards

Your employees are engaged in different kinds of improvement work, and their efforts roll up into different areas of the business. Why limit what shows up on their boards to just one topic? Set your wallboards on a read-only slideshow that rotates through everything they need to see, from huddle boards to strategy dashboards.

Meetings & Huddles

Stay up to date between meetings and huddles, and also makes sure that you're reviewing the most current data at every one. Stop wasting time creating slide presentations for your meetings when you could just use KaiNexus wallboards to show the work, progress, and impact.
