

KaiNexus Branding

Unify Your Organization

Drive Adoption with Familiarity

When it comes to adopting a new tool, personalizing the look and feel of KaiNexus for your Users promotes brand cohesion within your organization and system adoption. To make your system environment as familiar as possible for your Users, the KaiNexus Branding Module allows you to add your organization's logo within your instance and customize KaiNexus colors, including the drop-down menus, the Create button, the Notification Bell, and the Bookmark icon

Easily Differentiate Between Templates

Templates standardize the information employees provide when submitting and implementing improvements. Not only can you configure Templates to fit your specific needs, but with KaiNexus Branding, you can also customize the color of your Templates too.

Bring Your Branding to Status & Reports

Do you use specific colors internally to identify different statuses or reports? The KaiNexus Branding Module has you covered on that. You can customize status and reporting colors to match your organization's standard branding.
