Simplify Their Experience

KaiNexus has powerful configuration options that allow you to limit what users see so as not to overwhelm them. Recommended simplification strategies include:

Create: The create button should only show users the types of items they'll be submitting. Ideally, these are limited to basic workflows like Ideas and Quick Wins.

Submit: To simplify the submission screen,

- Hide the Status
- Hide the Team
- Limit entry fields to Title & Description

View: Frontline users should have access to minimal boards. We recommend only a simple My Board showing:

- Items they submitted
- Their items in progress
- Their completed items
