

Strategy Deployment in KaiNexus

Interactive X-Matrices for CI Leaders & Execs

Why Use KaiNexus?

- Each section of the x-matrix is auto-populated based on activities in the system
- People throughout the organization can contribute to the x-matrix even if they know nothing about it, simply by associating their items with your pillars
- You can drill down into any item instantly by clicking through from the x-matrix, rather than looking in external sources for the information
- Selecting specific areas in the location picker automatically adjusts the x-matrix to fit that team's work
- No one needs to spend time updating the x-matrix; they update as soon as changes are made to items in the system
- KaiNexus x-matrices live on boards, making them easily accessible to the people that need them

Strategy Dashboard for Managers

Location Picker

The location picker on the left side of the board enables you to toggle between different parts of the organization to see their work as it relates to each of the pillars set by your executive team.

Simplified User Experience

Your managers just need to know how to interact with items on a board, leaving the complicated x-matrix to your CI leaders and executives. When they update the items on their strategic dashboard, the x-matrix is seamlessly updated.

Improved Visibility

This dashboard makes it easy to see the Key Metrics, Plan-Drivers, and Actions that roll up to each initiative without spending time sifting through spreadsheets and compiling reports.

Drill Down Capabilities

The powerful filters on this board enable managers and teams to see only the items relevant to them, sorted into the correct strategic pillar. They can drill down into any of the initiatives right from this board, and these charts are updated in real time.

Ask your CSM to help you build this board in KaiNexus!
