# Tiered Huddles in KaiNexus

## Location Picker

One of the primary benefits of doing Tiered Huddles in KaiNexus is that you give teams across the organization a standard way to organize and discuss improvement. Using the location filter, each location can pull in the relevant information onto the board for their team without needing to make anything custom.

## Escalation

By adding escalation tiers to your templates, you can move items seamlessly between levels of the organization. For example, the team in a Tier 3 huddle might review items submitted from their team as well as those escalated from tiers 4 and 5. They can then escalate necessary items to Tier 2, who will review them in their own huddle and escalate as needed to Tier 1.
